# EMPLOYMENT AND UNEMPLOYMENT

## NOVEMBER 1932

Reference No. 6.4

## EMPLOYMENT AND UNEMPLOYMENT, NOVEMBER 1972

This bulletin contains particulars of the numbers of employed wage and salary earners (referred to in the tables as "employees"), unemployed persons and job vacancies registered.

Seasonally adjusted statistics appear in Tables 1, 3 and 9-12. The methods used in seasonally adjusting these statistics are explained in *Seasonally Adjusted Indicators*, 1972 (Reference No. 1.10).

Preliminary estimates of employees are published each month in *Employed Wage and Salary Earners : Preliminary Statement* (Reference No. 6.12).

**NOTE.** See page 3, paragraphs 10-15, regarding the proposed adoption of new benchmarks and revision of estimates from July 1966.

## 1. EMPLOYED WAGE AND SALARY EARNERS

The figures in this section generally relate only to civilian wage and salary earners, not the total labour force: they therefore exclude employers, self-employed persons and unpaid helpers. Also excluded, because of the inadequacy of current data, are wage and salary earners in agriculture and private domestic service. For the sake of brevity, wage and salary earners are referred to in the tables as "employees". Defence forces are included in Table 1.

2. The estimates in Tables 1 to 6, except those relating to government employees and defence forces, are based on comprehensive data (referred to herein as "benchmarks") derived for the purpose from the population census of June 1966. Month-to-month changes shown by current returns (see below) are linked to the benchmark data to derive the monthly estimates.

3. Although the series measure reasonably well the short-term trends in employment in the defined field, they may be less reliable for longer-term measurement. There are conceptual differences between benchmark and current data, and changes in such factors as labour turnover, multiple jobholding and part-time working all affect the trend over longer periods.

### Concepts and definitions

4. Basically the concepts and definitions applicable to these estimates are those which were adopted at the 1966 census. The latter conformed closely to the recommendations of the Eighth International Conference of Labour Statisticians. At the census the following questions were asked in respect of all persons fifteen years of age and over:

"Did the person have a job or business of any kind last week (even though he may have been temporarily absent from it)?"

"Did the person do any work at all last week for payment or profit?"

Provided he had not been temporarily laid off by his employer without pay for the whole of the week, a person who answered "yes" to either of these questions was classified as employed. Persons in this category who were stated to be "working for wages or salary", except members of the defence forces, persons employed in agriculture or private domestic service, and crews of overseas ships have been included in the benchmarks for the current series.

5. Current data supplied by reporting enterprises or establishments generally refer to persons on the payroll for the last pay-period in each month. Persons who are on paid leave or who work during part of the pay-period and are unemployed or on strike during the rest of the period are generally counted as employed. Those not shown on employers' payrolls because they are on leave without pay, on strike or stood down for the entire period are excluded.

6. Government employees comprise not only administrative employees, but also all other employees of government bodies (Commonwealth, State, local and semi-government) on services such as railways, road transport, banks, post office, air transport, education (including universities), broadcasting, radio and T.V., police, public works, factories, departmental hospitals and institutions, migrant hostels, etc.

### Current data

7. The data needed to derive the estimates for periods subsequent to the benchmark date (June 1966) are obtained from three main sources, namely, (a) current payroll tax returns; (b) current returns from government bodies; and (c) some other current returns of employment (e.g. for hospitals); the balance, i.e. unrecorded private employment, is estimated. At June 1966 recorded employment obtained from the foregoing sources accounted for about 85 per cent of the total number of employees in the industries covered, as determined by the census.

8. Payroll tax returns are lodged at present by all employers paying more than \$400 a week in wages (other than certain Commonwealth Government bodies, religious and benevolent institutions, public hospitals and other similar organisations specifically exempted under the Commonwealth and State Pay-roll Tax Acts of 1971).

### Industry

9. The industry classification used throughout the series is that of the population census of June 1966. The June 1966 figures were derived from particulars recorded for individuals on population census schedules, while the estimated monthly changes are derived mainly from reports supplied by employers, relating to enterprises or establishments. Because the two sources differ in some cases in the reporting of industry, the industry dissection of the census totals was adjusted to conform as closely as possible to an establishment reporting basis. For this reason, and because crews of overseas ships were excluded from the benchmark figures, the estimates for June 1966 differ from those published in census bulletins (e.g. No. 9.6) which show particulars of the occupational status and industry of the population, and in other publications which contain population census results.

NOTE: See page 3, paragraphs 10-12, regarding the proposed adoption of new benchmarks and revision of estimates from July 1966.

### Adoption of new benchmarks and revision of current estimates

10. As results from each successive population census become available it is customary to derive from them new benchmarks for the monthly employment series, and to revise the published estimates for all periods subsequent to the date of the previous census. The intention to utilise the 1971 census results in this way has been expressed in these explanatory notes on a number of occasions.

11. Preliminary results of the 1971 census, based on a sample of census collector's districts, were published in November 1972, in a series of bulletins entitled *Characteristics of the Population and Dwellings - Sample Estimates* (Reference No. 2.82). Indications from these sample estimates are that if, as on previous occasions, the census totals were to be used as benchmarks for the employment series, the level of the monthly employment estimates would have to be significantly reduced.

12. However, evidence from census post-enumeration surveys indicates that the filling in of census questionnaires by householders tends to identify a smaller number of persons as being in the labour force than do other methods of measurement (e.g. household surveys conducted by personal interview), and that components of the total labour force, such as employed wage and salary earners, tend to be affected in the same way. This tendency increased between the 1966 and 1971 censuses.

13. Comparison between census results and the monthly estimates of employed wage and salary earners is affected not only by the discrepancy referred to above but also by the accumulation of errors in the intercensal employment estimates and differences in the methods of industry classification. The new Australian Standard Industrial Classification was adopted in coding the industry of the population at the 1971 census, whereas in the monthly estimates the 1966 census classification is still used. (See paragraph 9 above.)

14. When final census figures become available new benchmarks for the employment series will be established, by the use of census and other relevant data, and the current series from July 1966 will be revised. The revision is expected to reduce the level of the current estimates.

15. In the meantime the monthly estimates will continue to be published on the present basis, since they are regarded as sufficiently accurate for the measurement of short-term movements. However, caution should be exercised if they are used as indicators of longer-term change.

### Estimates for earlier periods

16. Detailed industry figures for each State and Australia and the government employment series for the period June 1966 to June 1971 were published in two special bulletins (Reference No. 6.23) issued on 24 April 1970, and 11 January 1972.

17. Estimates for the period July 1966 to June 1971 will be revised when results of the 1971 population census become available. In due course the estimates for periods prior to June 1966 will be revised, but on a basis comparable with that of the 1961 census benchmarks, the information needed to revise these benchmarks on the 1966 census basis not being available.

### Discontinuity of series

18. Estimates for the period June 1966 to date are not comparable with those for earlier periods, because of (a) the adoption of a new definition of the labour force in the 1966 population census, from which the benchmarks for the current series were derived and (b) the inclusion of full-blood Aborigines. The new definition resulted in the inclusion of a considerable number of part-time employees (mostly females) who had previously been excluded.

19. At the 1971 population census all trainee teachers were for the first time classified as not in the labour force. Previously those enrolled at government teachers colleges (and in some cases at other institutions also) had been included. Trainees affected by the reclassification are now excluded from estimates of employees, and in consequence there is a break in the series between June and July 1971, the numbers of males and females excluded in July 1971 being approximately 7,000 and 17,000 respectively. Revised figures for the period July to December 1971 were first published in the December 1971 issue of this bulletin.

### Larger private factories

20. The figures in Tables 7 and 8 relate to employees of the majority of the larger factories in the private sector. Further particulars of the collection are given on page 10.

NOTE. 1. Any discrepancies between totals and sums of components in tables are due to rounding.

2. The following symbols mean:

..	Nil or less than 50 persons.
r	Figure or series revised since previous issue.
---	Break in continuity of series (where drawn across a column between two consecutive figures).
†	Affected by industrial dispute.

(a) The methods used in seasonally adjusting these statistics are explained in *Seasonally Adjusted Indicators 1972* (Reference No. 1.10). (b) Permanent defence forces in Australia and overseas. Includes national servicemen enlisted in the Regular Army Supplement. Where the intake occurred at the end of the month, national servicemen have been included in the defence forces figures in the following month. (c) From July 1971 excludes trainee teachers, some of whom were classified as wage and salary earners for earlier periods. See paragraph 19 on page 3.

(a) Includes persons employed in the Australian Capital Territory who reside in adjoining areas. (b) Includes industrial as well as administrative employees. For definition see page 2.

# EMPLOYEES IN LARGER PRIVATE FACTORIES

The series shown in Tables 7 and 8 below are obtained, by joint arrangement with the Department of Labour, from monthly surveys of practically all private factories with 100 or more employees and a large proportion of those with 50-100 employees. They generally provide an advance indicator for the subsequent estimates of employees in manufacturing industry.

Employers co-operating in the survey are asked to supply, as at the last pay-day in the month, the number of employees in the factory or on the factory office staff whose employment is directly related to manufacture. Selling and distribution staff are excluded. Persons on strike, locked out or stood down as a result of an industrial dispute for the whole of the week ending on the date to which the employment figures relate are also excluded.

Levels of employment in food-processing, drink and tobacco factories are subject to seasonal and irregular fluctuations. In order to isolate these effects, separate statistics are provided on the movements in factories other than in food, drink and tobacco.

The list of factories included in the surveys is revised at the beginning of each year. It should accordingly be noted that a continuous monthly series on a uniform basis is available only from January of the previous year.

## 2. UNEMPLOYED PERSONS

The tables in this section contain (a) estimates of the total number of persons unemployed, derived from the quarterly population survey, (b) the numbers registered with the Commonwealth Employment Service as unemployed, and (c) the number in receipt of unemployment benefit.

## TOTAL UNEMPLOYED PERSONS : POPULATION SURVEY ESTIMATES

The quarterly population survey is carried out on a sample basis throughout Australia in February, May, August and November each year. Interviews are conducted during a period of four weeks in the State capital cities and two weeks in other areas. Particulars of the numbers of persons employed or unemployed, and of the total labour force, are published each quarter in a mimeographed bulletin *The Labour Force* (Reference No. 6.20).

2. For purposes of the survey, unemployed persons are defined as all those who, during the whole of the week prior to the interview week, did no work at all and either :

- (a) did not have a job or business and were actively looking for work (including those who stated that they would have looked for work if they had not been temporarily ill or believed no work was available or had not already made definite arrangements to start work in a new job after survey week), or
- (b) had a job from which they were temporarily laid off without pay for the whole week.

3. Unemployed persons therefore comprise those looking for full-time work, those looking for part-time work and those temporarily laid off from either full-time or part-time jobs. This definition of unemployed persons conforms closely to that recommended by the Eighth International Conference of Labour Statisticians, Geneva, 1954.

4. Since the estimates are based on a sample, they may differ from the figures that would have been obtained from a complete census using the same questionnaires and procedures. There are about two chances in three that the differences would be less than 3,000 for total unemployed males, less than 2,500 for total unemployed females and less than 4,000 for total unemployed persons, and about nineteen chances in twenty that they would be less than twice these figures.

5. The sample estimates will differ from the number of persons registered with the Commonwealth Employment Service (see Table 10) as not employed, awaiting placement in full-time employment, for a number of reasons, including the following :

- (a) the survey estimates include persons looking for part-time work,
- (b) they exclude persons who did any work at all during the survey week,
- (c) they represent averages over a period (see paragraph 1), whereas the numbers registered refer to a particular day,
- (d) they are subject to sampling variability (see paragraph 4),
- (e) some unemployed persons (particularly females) do not register with the Commonwealth Employment Service, and
- (f) some persons registered as unemployed who find jobs may not notify the Commonwealth Employment Service at once that they have done so.

(a) Comprises all persons who were still registered with the Commonwealth Employment Service (C.E.S.) at the Friday nearest the end of the month, who claimed when registering that they were not employed, and who were seeking full-time employment, i.e. 35 hours or more per week. They include persons referred to employers but whose employment was still unconfirmed, and persons who had recently obtained employment without notifying the C.E.S. All recipients of unemployment benefit are included. (See Table 11). (b) Includes the Australian Capital Territory. (c) Includes the Northern Territory. (d) School-leavers comprise all persons under the age of 21 who, at the time of registering with the C.E.S., (i) had ceased full-time primary or secondary education within the previous three months; or (ii) were still at school but notified the C.E.S. that they would leave school before the end of the school year if a full-time job were available. (e) See note (b) to Table 9.
